

# Are your improvement plans SAFE or BOLD?

Leaders are constantly challenged to improve group performance and success rate. Even when teams commit to change, they often take the SAFE, less impactful route.

If your team creates products, develops software or manages projects, we may be able to help you move your improvement plans from SAFE→BOLD.

Our latest one day workshop provides a creative framework for:

- Testing Processes and Models using Gamification
- Analyzing the Group's Performance using the powerful After Action Review approach
- Developing High Impact Plans for Change using SAFE→ BOLD Analysis\*
